

Two - Dimensional Vorticity Field Autoregression

Train Model

- 3 Input, 5 Output
- ConvLSTM
- 시간, 공간 동시 학습
- Scheduled Sampling
- $1 - \epsilon$: Input의 각 frame이 Prediction으로 들어갈 확률
- Model
- $\text{TF}(\epsilon=1) \mid \epsilon = 0.9(\text{at } 10 \text{ epoch}) \mid \epsilon = 0.8(\text{at } 10 \text{ epoch})$

Result
